

## XML Data Format for Reporting Learner Data to PARS for Licensing

This document defines the elements to be used by providers when reporting learner completion data to ACCME’s Program and Activity Reporting System (PARS) for the state medical board pilot. The XML schema is based on version 1.0 of the **Medbiquitous ActivityReports** standard.

Some key points:

1. Learner data is being collected in PARS for CME activities provided as a part of the state medical board pilot. All learner records must reference a valid license number in either Tennessee or North Carolina or a valid National Provider Identifier (NPI).
2. This description includes only the data elements that are required to submit learner data to PARS. For complete documentation on all data elements that are supported by the Medbiquitous standard, please refer to the Medbiquitous website. Note that the ActivityReport standard incorporates by reference portions of the Healthcare Professional Profile and Healthcare Learning Objects Metadata (LOM) standards.
3. ACCME has extended the Medbiquitous schema by adding a custom root container (ACCMELearnerReports) and a subelement in the ActivityReport XtensibleInfo element to store metadata related to record transaction operations.
4. PARS will expect an ActivityReport element container for each participant completion record in the file. Each ActivityReport container will include one completion record for one learner.

### Example Records

## XML Data Format for Reporting Learner Data to PARS for Licensing

Following are examples of ACCME Learner Reports records formatted 1) for reporting participant completion of an activity earning AMA PRA Category 1 Credit™, and 2) for reporting participant completion of an activity also earning credit for Tennessee's opioid management education. These records contain non-production data; providers will need to supply references to valid activity records in their own account in PARS when reporting data.
